## Preface

## Photosystem II

This special issue of *BBA-Bioenergetics* highlights recent advances of our understanding on photosystem (PS) II. The newest available structure of PSII at 1.9 Å resolution [1], although not described here, has inspired the authors of this special issue to update and modify their earlier theories and models on the function of the water splitting PSII. Reviews cover detailed structure–function analyses and evolutionary considerations of the water oxidizing reactions, charge separation and acceptor side mechanisms of PSII, as well as the cyclic electron transfer within PSII. Likewise, the light-harvesting systems, the small PSII proteins and the oxygen evolving proteins are thoroughly discussed and the newest aspects on supramolecular organization of PSII are presented. The origin and consequences of oxidative stress and photodamage in PSII are addressed in several reviews and the various photoprotective mechanisms are highlighted. Finally the biogenesis and repair of PSII, the latter strongly regulated by reversible PSII core protein phosphorylation, are covered in this special issue of Photosystem II.

## Reference

- [1] Y. Umena, K. Kawakami, J.-R. Shen, N. Kamiya, Crystal structure of oxygen-evolving photosystem II at a resolution of 1.9 Å. *Nature* 473 (2011) 55–60.

**Eva-Mari Aro** is a professor in Molecular Plant Biology at Turku University (since 1987), and an Academy professor from 1998 to 2008. Teaching and research: plant physiology, photosynthesis and biofuel production. She supervised 25 PhD theses in the field of photosynthetic light reactions, particularly the biogenesis, turnover and repair of Photosystem II. She has been a visiting researcher at the University of California Berkeley, CSIRO Canberra, CEA Cadarache, Hebrew University and Stockholm University. She is the president/past president of the International Society of Photosynthesis Research 2004–2010, and a board member of the European Plant Science Organisation. She is the Chair of the Finnish Centre of Excellence "Integrative Photosynthesis and Bioactive Compound Research at Systems Biology Level" and partner of several EU FP7 and Nordic research networks. She is an honorary professor of the Chinese Academy of Sciences.
